

## **CAP777 – WEB DEVELOPMENT USING PHP**

CA - 3

### **TECHNICAL EVENTS GENERATION WEB PORTAL FOR STUDENTS**

Submitted by

**Mannu Kumar – 12204749**

**Koushal Kumar A– 12204924**

**School of Computer Application  
Lovely Professional University, Phagwara**

## **Acknowledgment**

The project I had under the **STAR COURSE – CAP777 (WEB DEVELOPMENT USING PHP)** was a great chance for learning and professional development. Therefore, I consider myself as a very lucky individual as I was provided with an opportunity to be a part of it.

I express my deepest thanks to my course instructor **Mr. Sarabjit Kumar (Assistant Professor) SCA, LPU** for allowing me to grab this opportunity. I choose this moment to acknowledge his contribution gratefully by giving necessary advices and guidance to make my internship a good learning experience.

**Mannu Kumar 12204749**

**Koushal Kumar A 12204924**

## **1. Introduction to the Project**

The project, named Technical Event Generator for Student as a web portal, is created with the help of HTML, CSS, bootstrap for front end design and PHP, MySQL for the backend design i.e., Database. At the backend, I am using XAMPP server to create a database.

The main purpose of this project is to simplify the process of handling each event by providing a web interface for admin, teacher, and students. In this the admin creates a technical event for the users (both student and teacher). At the time of login page, on this page one option is sign up. In sign up, the user fills the basic information like, name, phone number, password...and so on. After signing up, user directly go to the sign in page. In sign in page, the user enters two information, first is contact number and second is password. In the user module, the user easily registered the event.

## **2. Scope of the project**

The scope of this project is to easily conduct the event. The event is related to technical field. i.e., quiz of programming language, bootcamp of any field and so on. The registered user is easily accessing the event. If once the date expire, no one can registered in that event.

After the date expiration, the admin checks how many users are registered in this event. Because the admin adds the candidate those who applicable in this event.

This project is useful to conduct any small event for the university, for the any small IT company and any industries event and so on.

## **3. Modules/ Functionalities of the Project**

In this project having two modules. i.e., Admin and User. In this having two types of user which is Teacher and Student.

### **❖ Admin: --**

In admin module, the admin is just as administrator. The functionalities of this module are to create a event, add the student, add the teacher and also view the registered user records. At the time of creation of event, the details ask in the starting and ending date of the event. If the passing date is coming, then the event is automatically active in status. By default, it is inactive. Once the status is active then this event is visible on the user interface.

### ❖ **User: --**

The user module started from the login interface. That required the contact number of user and password which is entered at the time of registration. Once the user is logged successfully then the user interface is open. In this interface, only active events are visible which is added student. The work of user is only to register candidates by clicking the registration button. If any added candidates are not wanted to be registered in particular event, then the user not registered that candidates in this event. It means, the user having only functionality to registered and deregistered candidates.

## **4. Roles of individuals in the Project**

In this project having only two students and two modules also. The details of project member is given below: --

- **Mannu Kumar --- 12204749**
- **Koushal Kumar A --- 12204924**

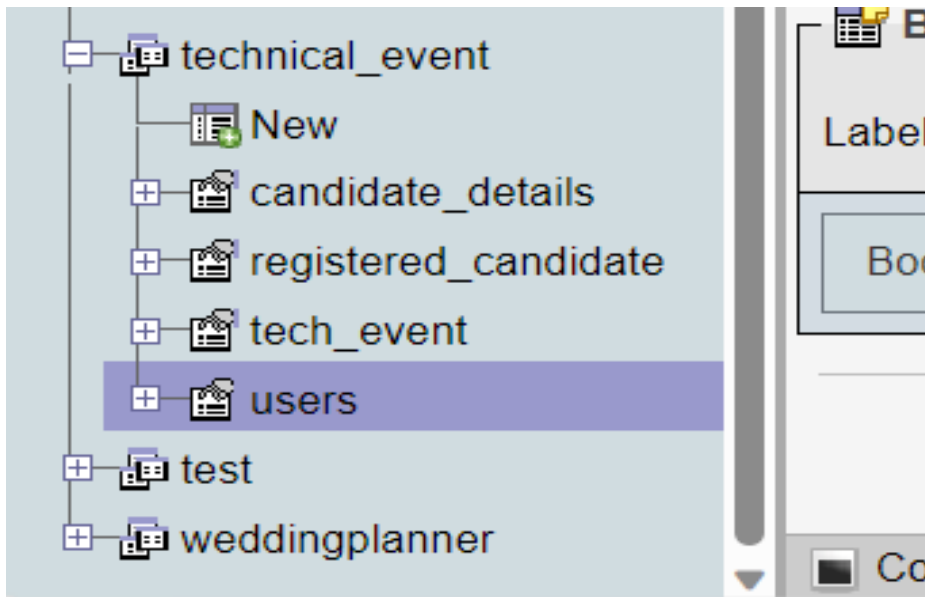

And the two modules, i.e., Admin and User. Both of member can be one-one module these details are—

- ❖ **Admin Module: --** This module is created by “Mannu Kumar (12204749)”. This module is perfectly designed with the help of HTML, CSS, Bootstrap and PHP. At the backend store data, used the XAMPP server. It is run by the localhost of the system.
- ❖ **User Module: --** This module is created by the “Koushal Kumar A (12204924)”. This module is also designed with the help of HTML, CSS, Bootstrap, PHP and MySQL.

## **5. Structure of the Back End (Database & Tables)**

In the backend, we are using XAMPP server to create a database and store the records in the table. In this project, I am creating the database with the name of “technical\_event”. Inside this database, created four tables having name: -- users, candidate\_details, registered\_candidate and tech\_event.

**The snapshot of the database: --**

In **users tables**, we have created five attributes these are – id, username, contact\_no, password and user\_type.

## 6. Structure of the Front End (User Interfaces)

In this project, I am using front end interfaces with the help of programming languages HTML, CSS, and Bootstrap. We can use different bootstrap libraries to make interface attractive.

I am sharing the snapshots of different modules:

❖ **Login page for Admin: --**

**Snapshots: --**

## ❖ Add Event Page: --

### Snapshots: --

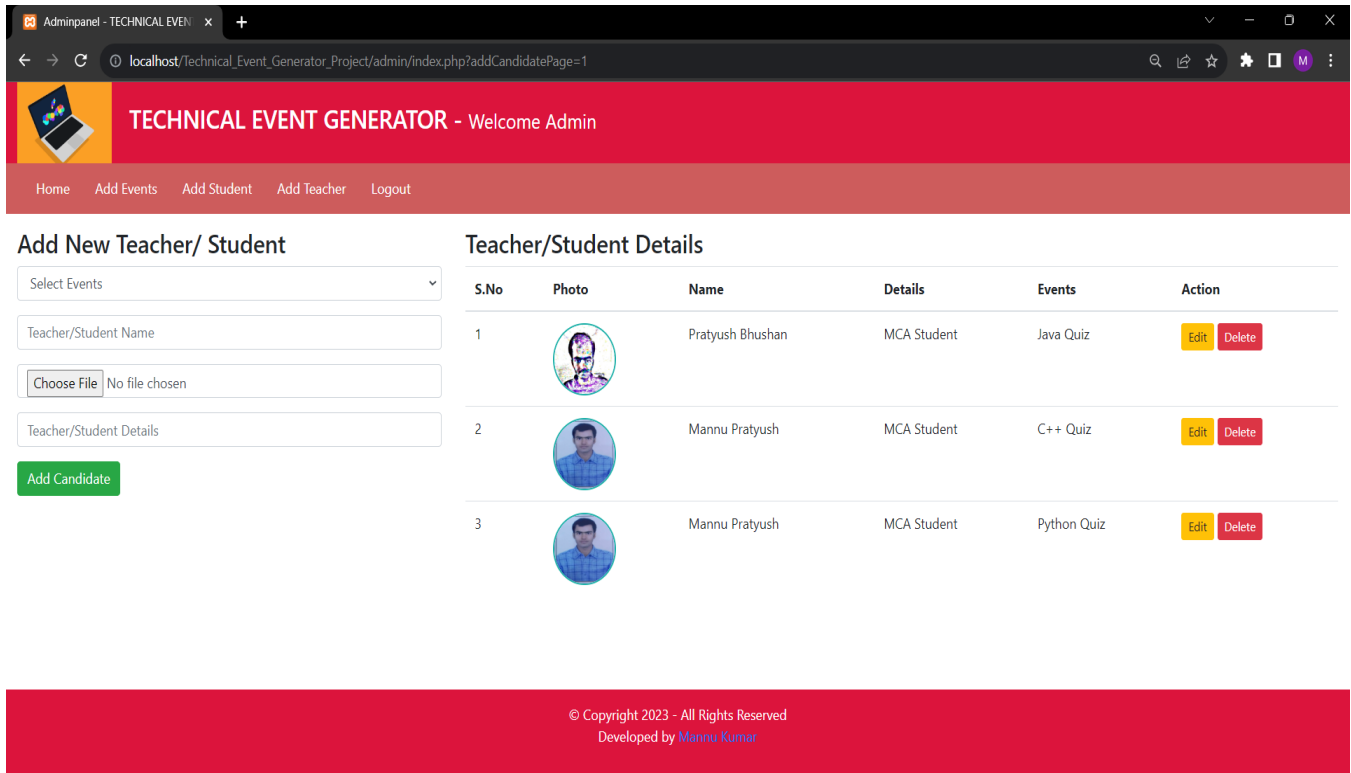

The screenshot shows the 'Add Event Page' of the 'TECHNICAL EVENT GENERATOR'. The page has a red header with the title 'TECHNICAL EVENT GENERATOR - Welcome Admin' and a navigation bar with links: Home, Add Events, Add Student, Add Teacher, and Logout. Below the header, there is a section titled 'Add New Technical Event' with four input fields: Event Topic, No of Candidates, Starting Date, and Ending Date. Below these fields is a green button labeled 'Add Technical Event'. To the right of the form is a section titled 'Upcoming Events' containing a table with the following data:

S.No	Event Name	Candidates	Starting Date	Ending Date	Status	Action
1	Java Quiz	3	2023-10-15	2023-10-17	Active	<a href="#">Edit</a> <a href="#">Delete</a>
2	Python Quiz	3	2023-10-15	2023-10-20	Active	<a href="#">Edit</a> <a href="#">Delete</a>
3	C++ Quiz	10	2023-10-18	2023-10-23	InActive	<a href="#">Edit</a> <a href="#">Delete</a>

The footer of the page contains the copyright notice: © Copyright 2023 - All Rights Reserved. Developed by Mannu Kumar.

## ❖ Add Teacher/ Student: --

### Snapshots: --

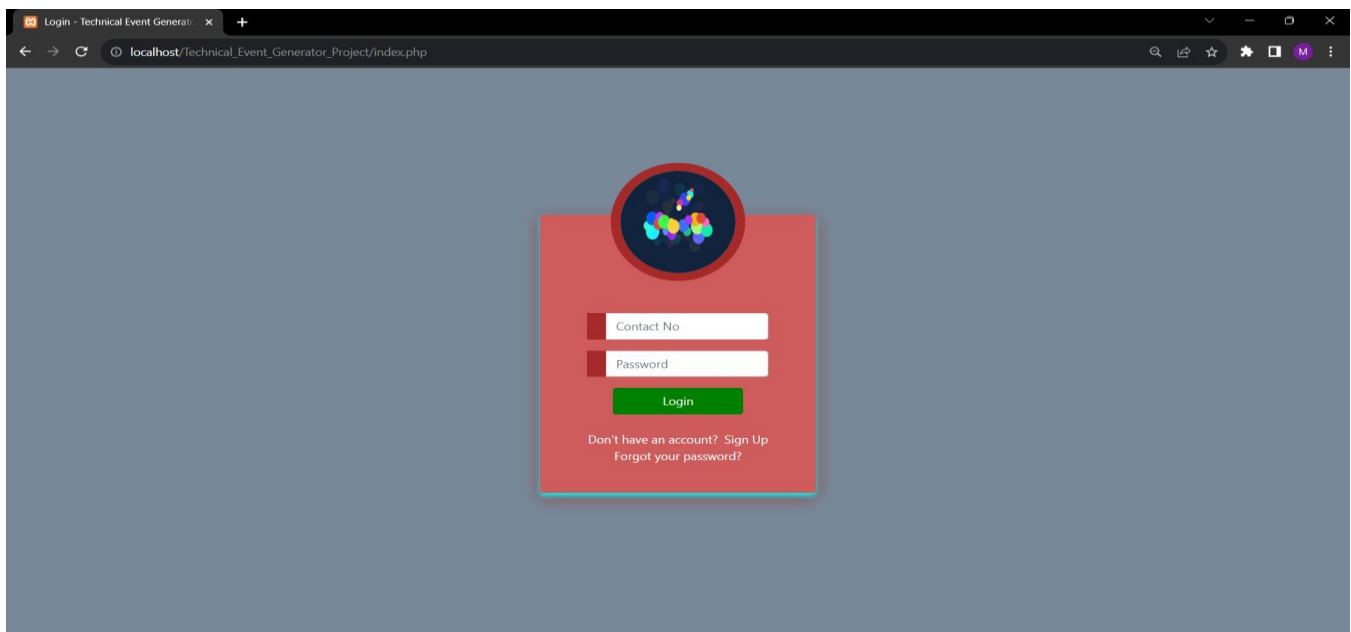

The screenshot shows the 'Add New Teacher/ Student' page. On the left, there is a form with the following fields: 'Select Events' (a dropdown menu), 'Teacher/Student Name' (a text input), 'Choose File' (a file upload button showing 'No file chosen'), and 'Teacher/Student Details' (a text input). Below the form is a green 'Add Candidate' button. On the right, there is a table titled 'Teacher/Student Details' with the following columns: S.No, Photo, Name, Details, Events, and Action. The table contains three entries:

S.No	Photo	Name	Details	Events	Action
1		Pratyush Bhushan	MCA Student	Java Quiz	<a href="#">Edit</a> <a href="#">Delete</a>
2		Mannu Pratyush	MCA Student	C++ Quiz	<a href="#">Edit</a> <a href="#">Delete</a>
3		Mannu Pratyush	MCA Student	Python Quiz	<a href="#">Edit</a> <a href="#">Delete</a>

At the bottom of the page, there is a red footer bar with the text: © Copyright 2023 - All Rights Reserved. Developed by Mannu Kumar.

## ❖ Login Page for User: --

### Snapshots: --

The screenshot shows the Login page. It features a red login box with a circular logo at the top. Inside the box, there are two input fields: 'Contact No' and 'Password'. Below these fields is a green 'Login' button. At the bottom of the box, there is a link that says 'Don't have an account? Sign Up' and a link that says 'Forgot your password?'.
